ABS is an extruded thermoplastic sheet with excellent rigidity, toughness, impact resistance and thermoforming qualities. Making it an extremely versatile product inside and outside.

Acrylic capped ABS is a co-extruded product developed for the wet wall lining industry. This light weight product has a clear acrylic capping on one side to give a glossy and easy to clean surface.

Acrylic cell cast sheet has excellent clarity, rigidity and hardness which makes it very versatile in areas from glazing to signage, fabrication and building. It is UV stabilised for use outdoors.

ACM Sheet (Signalloy & Constructalloy) comprises a layer of aluminium skin on both sides, sandwiching a polyethylene plastic core in a continuous co-extrusion process. It is excellent for signage and cladding.

A wide range of **Book Binding items** are carried from world leading brands. Products include BB board, ring mechanisms, fasteners, soft and rigid PVC's and leathers.

Hi Impact Polystyrene Sheet (HIPS) is a co-extruded thermoplastic used for thermoforming. It is often used in the packaging and screen printing industries. HIPS is considered to be a cost effective option.

Hospital film is a high grade PVC sheeting in roll form. It is used for mattress covers, shower curtains, shower caps, toilet bag lining and other damp use applications. It can be washed many times and still look great.

Thin gauge films range from food grade requirements like microwave safe to beauty product marketing. The product area covered includes PVC rigid or soft, Pet film and Polypropylene film. Commonly used in packaging applications.

Polycarbonate film is an extruded graphic film designed to meet the diverse requirements of both screen printers and end users. Excellent clarity, strength, durability and temperature resistance.

Polycarbonate sheet (Lexan (Sabic) resin) is a virtually unbreakable alternative to glass or acrylic where toughness and durability are required. This extruded clear product has a range of uses from residential to industrial.

Polyethylene is more widely used today than any other thermoplastic. It is an extremely tough and durable product used in many different applications from specialised machined parts to cutting boards. It is available in various sheets.

PETG is a high quality, cost effective alternative to polycarbonate and acrylic. Designed to meet the requirements of a broad range of point of purchase items and signage applications. Available in clear sheet and thin gauge film.

Polypropylene thin gauge sheets are light weight, 100% recyclable and very robust. It can be printed and is used in a variety of areas including packaging, stationery and promotions.

Polypropylene Flute or Polyflute is an extruded co-polymer polypropylene twinwall sheet which is commonly used as a economical sign writing and screen printing substrate. It is corona treated for excellent adhesion.

Polypropylene sheet is a product that offers a combination of outstanding physical, chemical, mechanical, thermal and electrical properties. This tough product is used for tanks, moulds and mudflaps.

PVC thin gauge film range of products is vast indeed from soft to rigid PVC's and from roll to sheet & self adhesive. From key tags to awning windows. For screen printing, HF welding and more. Available in clear and colours.

The **PVC sheet** range of products includes foam PVC (Komaprint), skin foam PVC (Komacel or Pyracel) and rigid PVC (Komadur). They are used in many interior and exterior applications from printed light weight signs, routed letters, electrical enclosures and formed parts etc.
