

What can I use VuPlex® on?

There are almost limitless applications for VuPlex®. Although VuPlex® is designed for a specific purpose (clear and coloured plastics), VuPlex® can be used on polished metals, painted and glass surfaces.

As you can see, VuPlex® has many uses. Take a can home today and try it for yourself!

AIRCRAFT

Windshields and canopies
Instrument facias
Leading wing edges

AUTOMOTIVE

Window tinting
Dashboard & Interior trim
Stone-Guards and
Clear coated alloy wheels

CARAVANS

Acrylic windows
Vinyl windows
Bench tops

Electronic Devices

DVD's & CD's
Plasma, LCD screens
MP3 players
Personal devices
Mobile phones

BOATS

Acrylic and polycarbonate
Windscreens
Clears and Bimini windows
Jet Skis

AROUND THE HOME / OFFICE

Outdoor PVC blinds
High gloss finishes
Composite plastic materials
Acrylic aquariums

MOTORCYCLE

Helmet visors
Polycarbonate windshields
Painted surfaces
Polished metals

**“A perfectly
clear maintenance
solution for plastics”**

CLEARLY BETTER!

www.vuplex.co

Finally...

an easy and effective way
to clean, protect & polish all
clear or colored plastics!

Conventional Plastic Cleaners

Previously, plastic cleaning
products have proven less than
satisfactory. Existing cleaners
are often messy, ineffective
and/or difficult to use. Many
products actually contain
chemicals or abrasives that can
damage the surface of plastic.

Trying is believing

VuPlex® works on countless plastic products,
preventing premature wear while helping them
to look their best. VuPlex® produces a shiny,
cleaner, more lustrous finish with no smears
or smudges. It makes colored plastics vibrant,
clear plastics virtually transparent and plastic
paints gleaming like new.

Of course, there's really only one way to be
convinced about the superiority of VuPlex®:

Try it for yourself!

Use VuPlex® when you're looking for the most
effective cleaner, protectant & polish for any
kind of plastic.

Introducing The Solution

1

VuPlex® effortlessly
removes stains that other
cleaners won't touch, by
applying a micro-thin layer
of protectant, sealing the
porous surface.

2

The polished finish makes
the plastic resistant to
debris, oil, scratches and
yellowing. It also make fine
scratches less visible.

3

Water and other
contaminates are repelled
from the surface giving
added protection. The
residual film is also safe
on food preparation surfaces.

4

The anti-static properties
help to repel dust and
abrasive materials.

Clearly Better!

VuPlex® also works great on...

Composite
bench tops &
sanitary acrylics

Stonework,
granite &
marble

Glass & mirrors

Polished
metals

Painted
surfaces

**MAINTAIN HIGH GLOSS
EXCELLENCE**

www.vuplex.co

VuPlex® is a product specifically designed to clean, protect and maintain plastic surfaces that are used in many modern high gloss finishes. VuPlex® was designed for use within the demanding Aviation industry for the maintenance of expensive aircraft windows and delivers a fast, safe and effective solution to plastic maintenance. Most normal cleaning products can damage plastic reducing its lifespan considerably. Here's how VuPlex® can work for you...

01

It cleans using safe ingredients that won't damage delicate high gloss surfaces. VuPlex® cleans a broad range of common household stains.

04

Together with increased surface hardness, VuPlex® also produces vastly improved scratch resistance by depositing a protective polymer film on the surface.

02

Static that is built up in the high gloss surface and attracts other abrasive material such as dust, is controlled by VuPlex's® anti-static properties.

05

VuPlex® has the ability to fill fine micro surface scratches in acrylic materials giving a greater luster on older acrylic materials.

03

Some high gloss materials when new (acrylic co-polymers) are very soft when masking material is removed. VuPlex® accelerates the hardening process protecting the surface from the outset.

06

Finally, water and other contaminants are repelled from the surface which is particularly important for stone and composite materials.
